SISTEMA DE LOGIN

- Sistema de autenticación propio (local):
Formulario con username y password que se verifica contra nuestra base de datos
- APIs de terceros (twitter, facebook, google, etc):
Formulario con username y password que se verifica siguiendo un protocolo - oAuthX - contra su base de datos

FLUJO HABITUAL DE VALIDACIÓN LOCAL

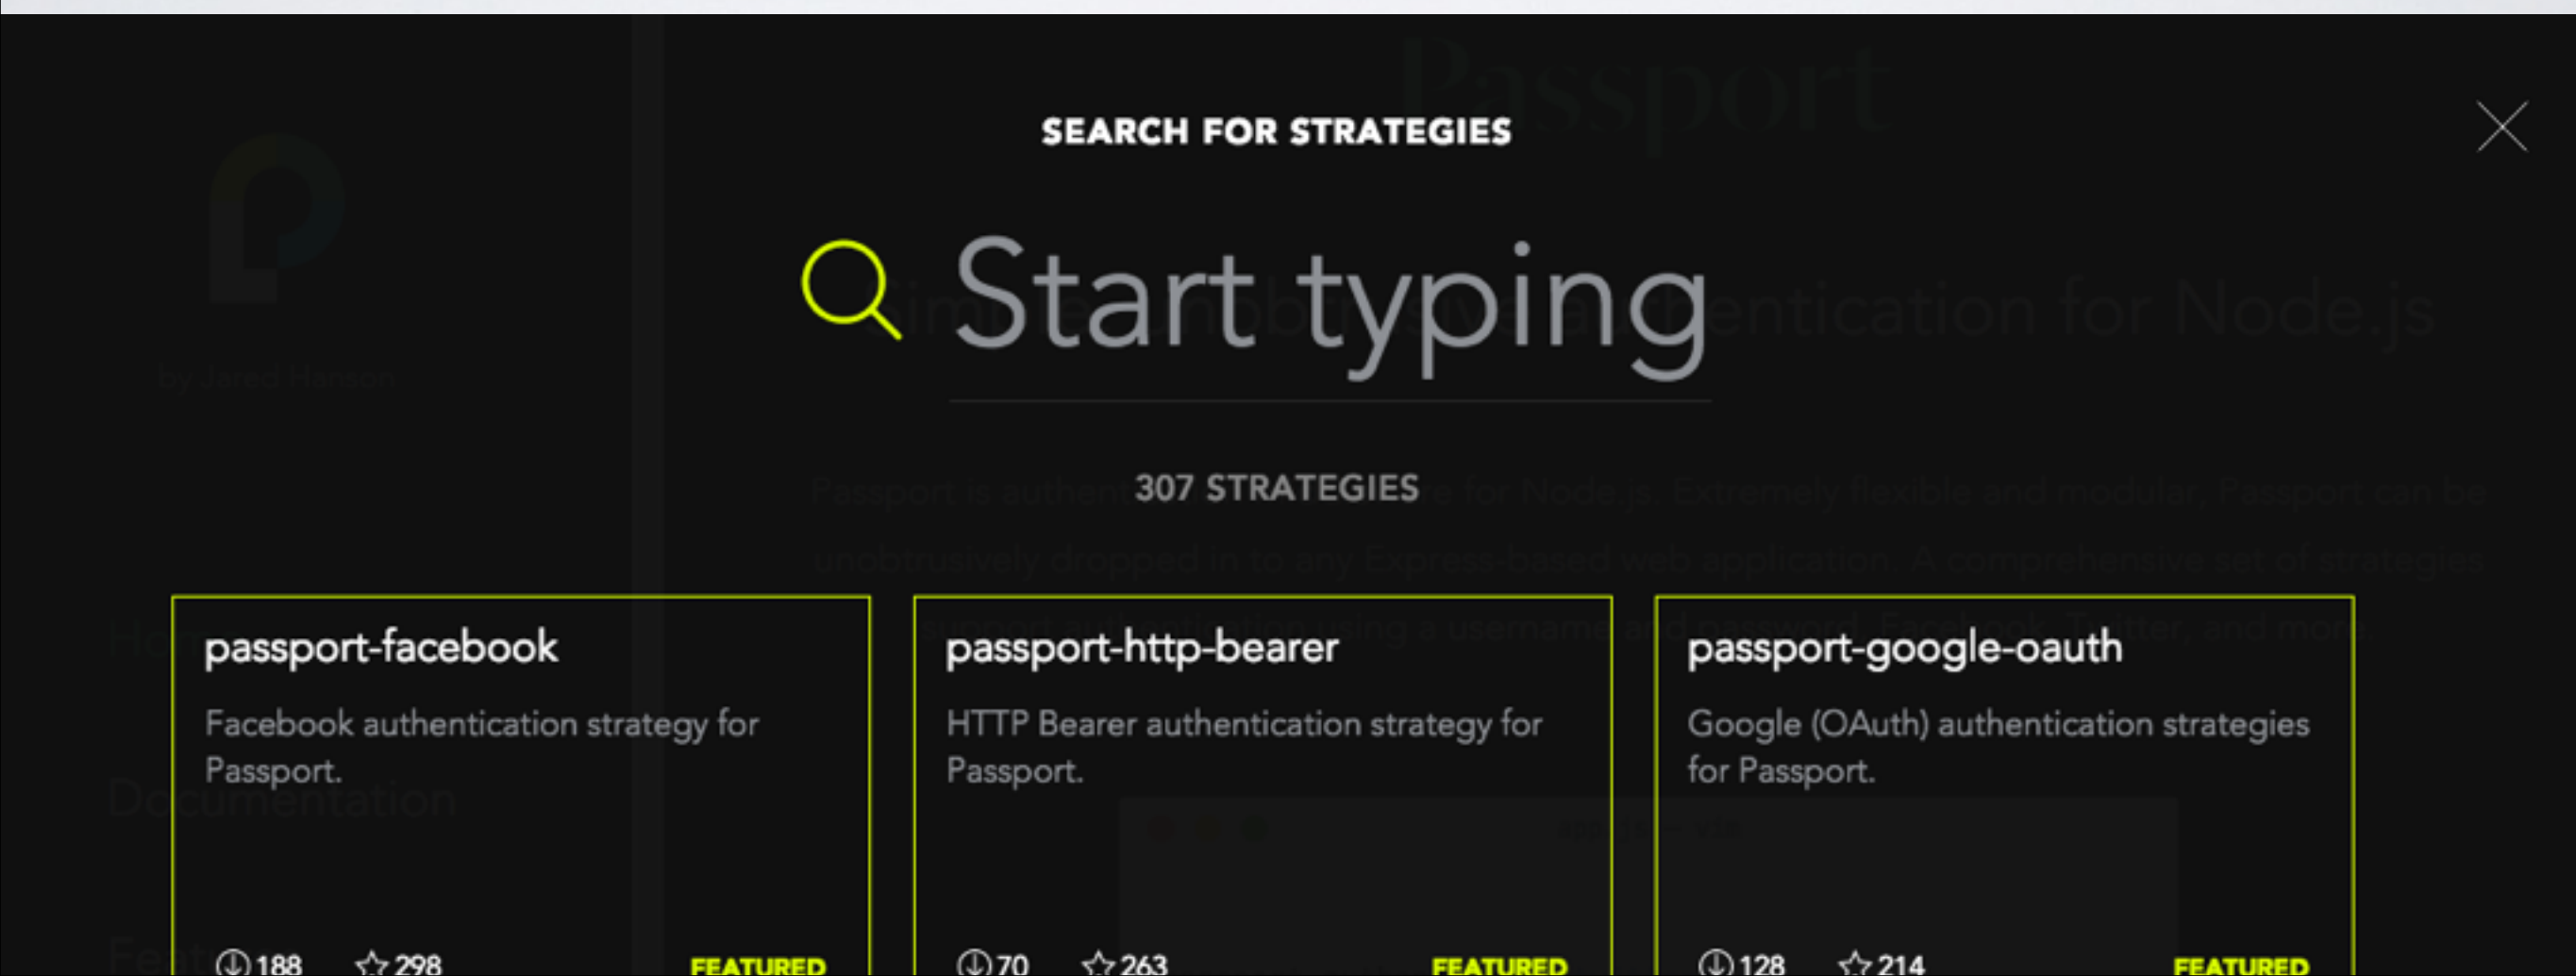

¡Vamos a Programarlo!

PASSPORT JS

Passport es un middleware de identificación para Node.js , extremadamente flexible y modular, que se puede enganchar con cualquier aplicación basada en Express y que nos provee de +300 estrategias

The screenshot shows the Passport.js website with a dark theme. At the top, there's a search bar with the text "SEARCH FOR STRATEGIES" and a magnifying glass icon. Below the search bar, it says "Start typing". To the left of the search bar is a large "P" logo and the text "by Jared Hanson". Below the search bar, it says "307 STRATEGIES". There are three strategy cards visible, each with a title, description, and a "FEATURED" badge. The first card is for "passport-facebook", the second for "passport-http-bearer", and the third for "passport-google-oauth". Each card also shows a download count and a star rating.

SEARCH FOR STRATEGIES

Start typing

307 STRATEGIES

Strategy Name	Description	Download Count	Star Rating	Featured
passport-facebook	Facebook authentication strategy for Passport.	188	298	FEATURED
passport-http-bearer	HTTP Bearer authentication strategy for Passport.	70	263	FEATURED
passport-google-oauth	Google (OAuth) authentication strategies for Passport.	128	214	FEATURED

¿CÓMO FUNCIONA?

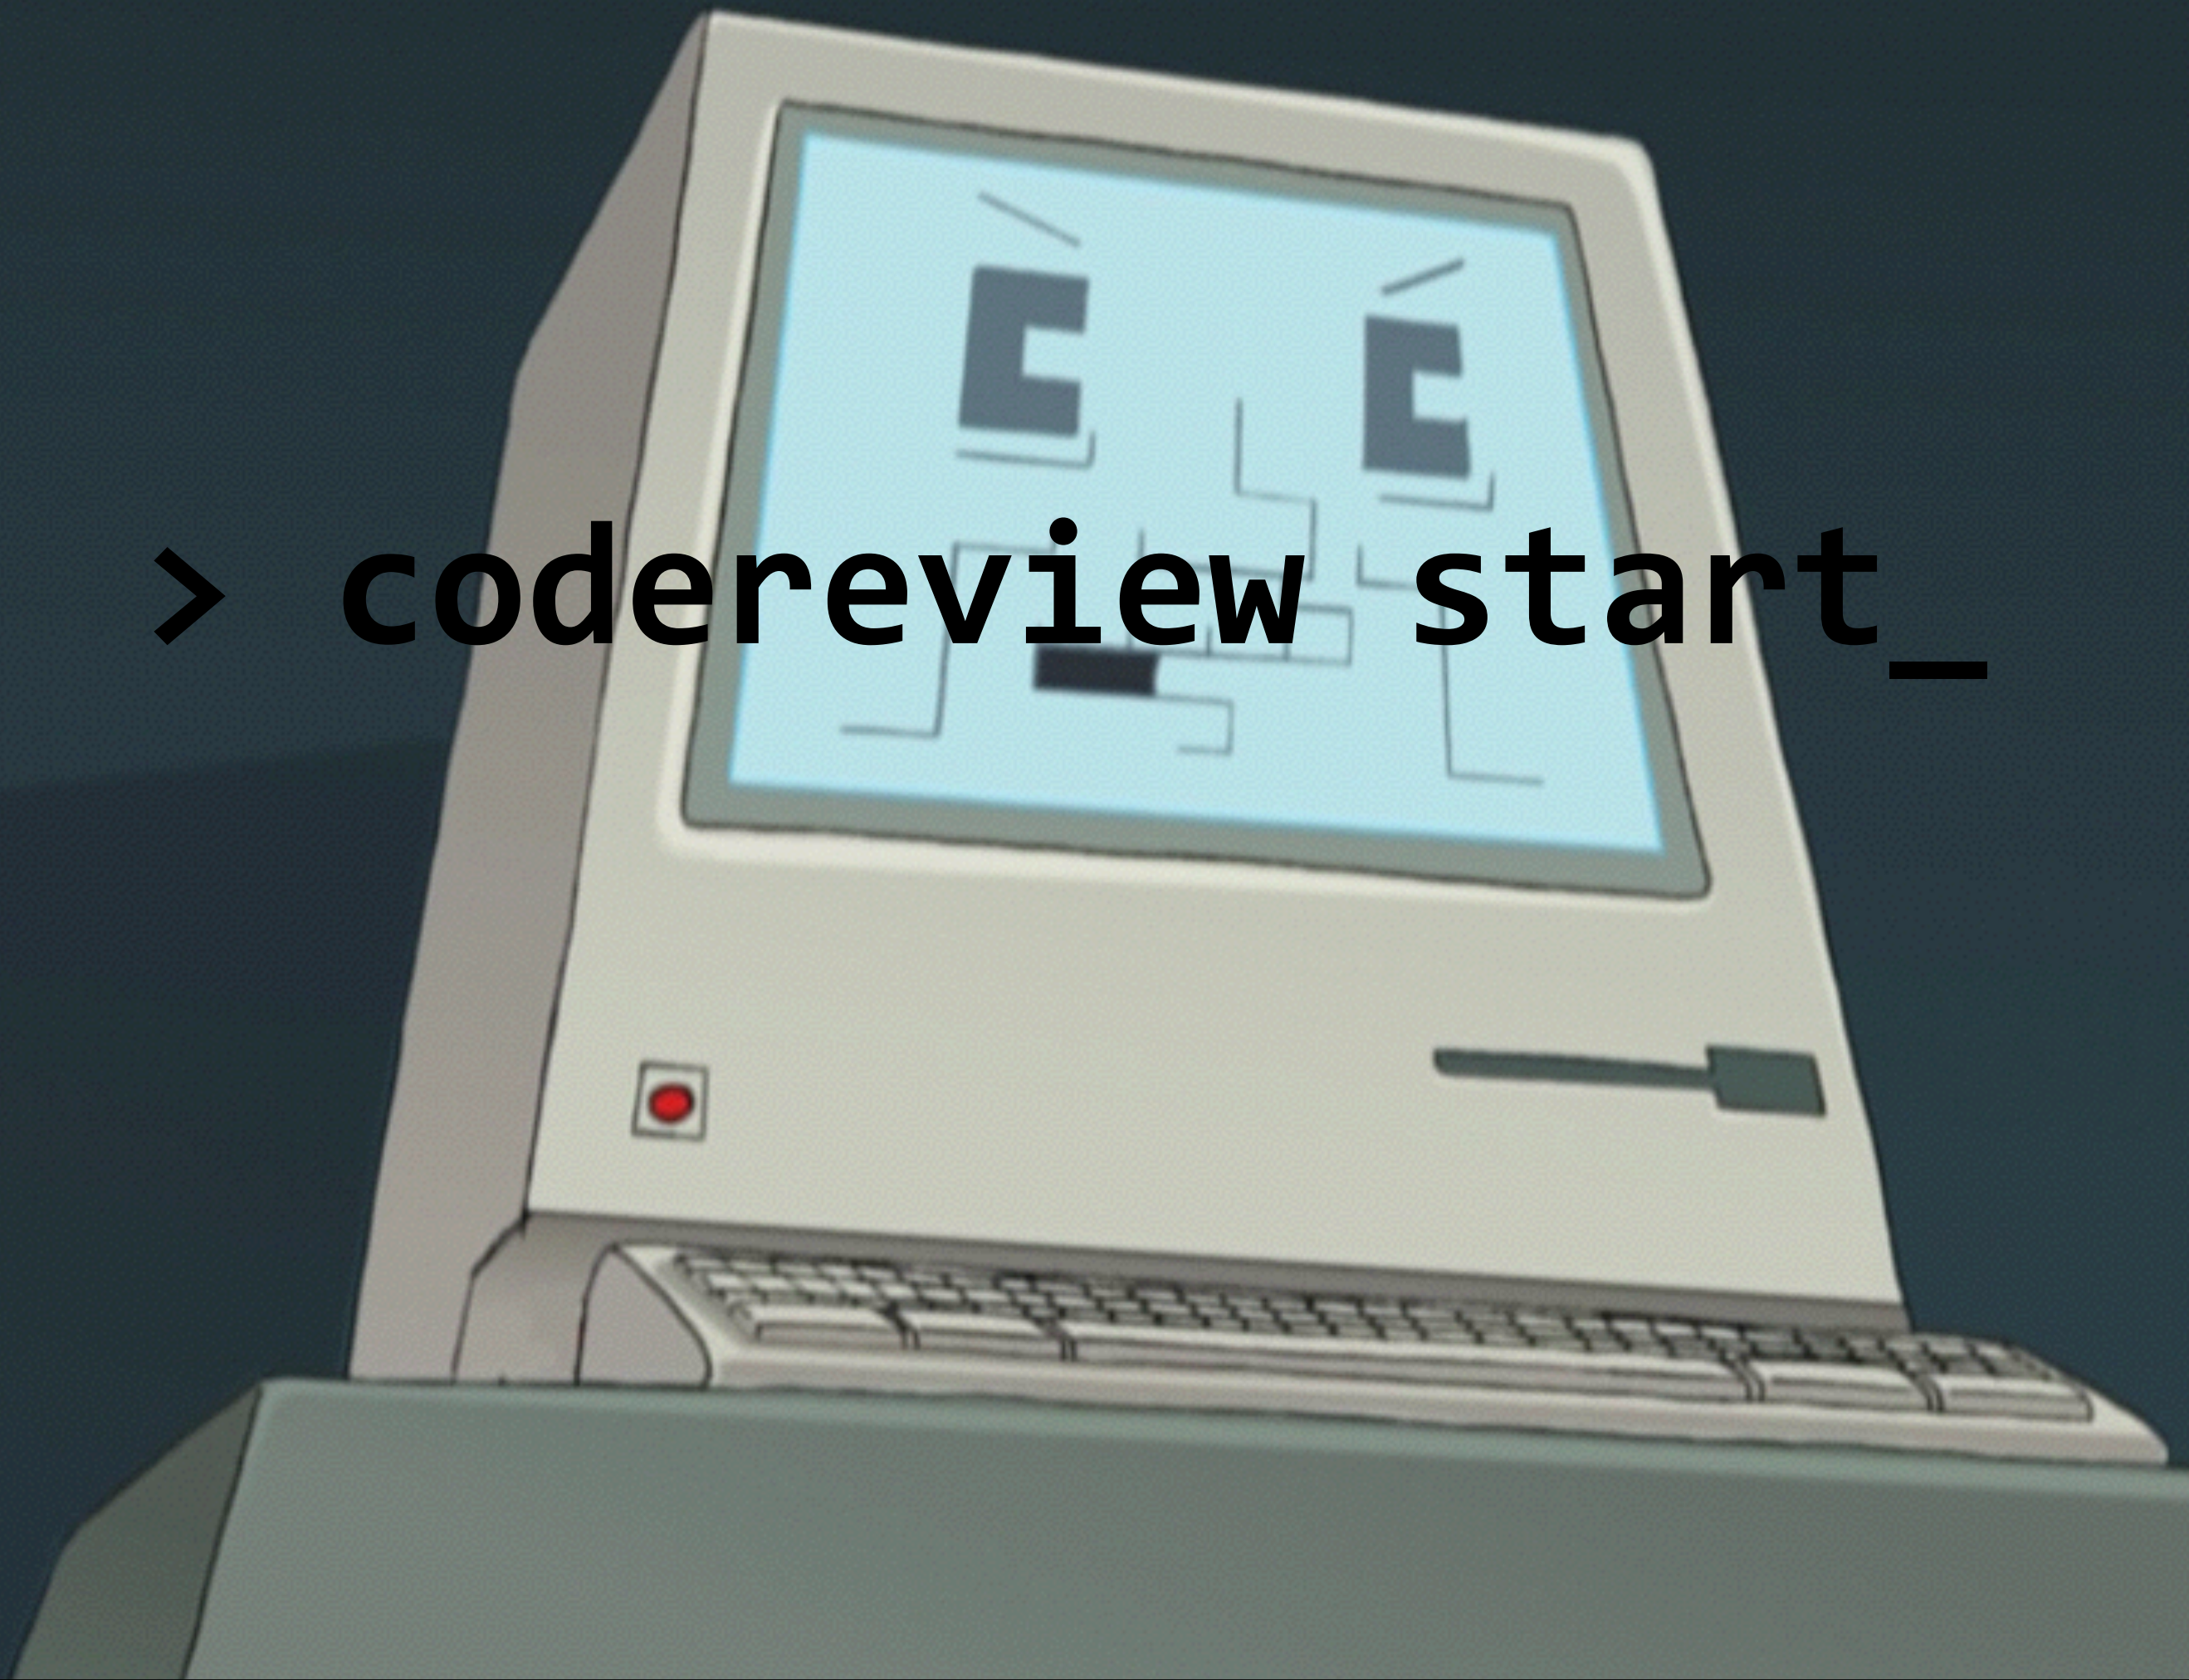

<https://bitbucket.org/therealpablors/socialmenteconectado>

- 1.- npm install -g yo
- 2.- npm install generator-express
- 3.- yo express

> codereview start_
